Performance prediction tools for parallel discrete-event simulation

Chu-Cheow Lim, Yoke-Hean Low, Boon-Ping Gan, Sanjay Jain, Wentong Cai, Wen Jing Hsu, Shell Ying Huang

May 1999 Proceedings of the thirteenth workshop on Parallel and distributed simulation

Publisher: IEEE Computer Society

Publisher Site

Full text available: pdf(788.70 KB) Additional Information: full citation, abstract, references, citings, index terms

We have developed a set of performance prediction tools which help to estimate the achievable speedups from parallelizing a sequential simulation. The tools focus on two important factors in the actual speedup of a parallel simulation program: (a) the simulation protocol used, and (b) the inherent parallelism in the simulation model. The first two tools are a performance/parallelism analyzer for a conservative, asynchronous simulation protocol, and a similar analyzer for a conservative, synchro ...

2 Using the SimOS machine simulator to study complex computer systems

January 1997 ACM Transactions on Modeling and Computer Simulation (TOMACS), Volume 7 Issue 1

Publisher: ACM Press

Full text available: pdf(731.76 KB)

Additional Information: full citation, references, citings, index terms, review

Keywords: computer architecture, computer simulation, computer system performance analysis, operating systems

3 Retargetable compiled simulation of embedded processors using a machine

Stefan Pees, Andreas Hoffmann, Heinrich Meyr

October 2000 ACM Transactions on Design Automation of Electronic Systems (TODAES), Volume 5 Issue 4

Publisher: ACM Press

Full text available: pdf(4.06 MB)

Additional Information: full citation, abstract, references, index terms

Fast processor simulators are needed for the software development of embedded processors, for HW/SW cosimulation systems, and for profiling and design of applicationspecific processors. Such fast simulators can be generated based on the machine description language LISA. Using this language to model processor architectures enables the generation of compiled simulators on various abstraction levels, assemblers, and compiler back ends. The article discusses the requirements of software devel ...

Execution-driven tools for parallel simulation of parallel architectures and applications D. K. Poulsen, P.-C. Yew

December 1993 Proceedings of the 1993 ACM/IEEE conference on Supercomputing

Publisher: ACM Press

Full text available: pdf(1.14 MB) Additional Information: full citation, references, citings, index terms

5 Manufacturing applications: Manufacturing modeling architectures: an architecture for a generic data-driven machine shop simulator

Charles McLean, Al Jones, Tina Lee, Frank Riddick

December 2002 Proceedings of the 34th conference on Winter simulation: exploring new frontiers

Publisher: Winter Simulation Conference

Full text available: pdf(228.99 KB) Additional Information: full citation, abstract, references, citings

Standard interfaces could help reduce the costs associated with simulation model construction and data exchange between simulation and other software applications -- and thus make simulation technology more affordable and accessible to a wide range of potential industrial users. Currently, small machine shops do not typically use simulation technology because of various difficulties and obstacles associated with model development and data translation. This paper provides an overview of work c ...

The use of micro level simulation in the design of a computer supervisory system George K. Hutchinson

June 1973 Proceedings of the 1st symposium on Simulation of computer systems

Publisher: IEEE Press

Full text available: pdf(1.26 MB) Additional Information: full citation, abstract, index terms

This paper describes the use of simulation, at the instruction level, in the design of the supervisory software of a multi-computer system. The computer system included a supervisory computer, satellite mini computers, secondary data storage devices, and terminals with probabilistic data demands. The model development criteria was to consider every instance of conflict in resource allocation and to simulate its resolution. The computer system was primarily concerned with supplying data to t ...

7 The hierarchical simulation language HSL: a versatile tool for process-oriented

simulation

D. P. Sanderson, R. Sharma, R. Rozin, S. Treu

April 1991 ACM Transactions on Modeling and Computer Simulation (TOMACS), Volume 1 Issue 2

Publisher: ACM Press

Full text available: pdf(2.68 MB)

Additional Information: full citation, references, citings, index terms,

review

Keywords: C++, HSL, hierarchy, inheritance, interpreter, modularity, process, simulation programming language

8 Getting graphics in gear: graphics and dynamics in driving simulation

Rod Deyo, John A. Briggs, Pete Doenges

June 1988 ACM SIGGRAPH Computer Graphics, Proceedings of the 15th annual conference on Computer graphics and interactive techniques SIGGRAPH '88, Volume 22 Issue 4

Publisher: ACM Press

Full text available: pdf(3.63 MB) Additional Information: full citation, abstract, references, index terms

Man-in-the-loop simulation uses a person in the control loop to provide feedback to the system operations. Proper operator cueing must be provided to ensure a realistic response. Real-time computer graphics and dynamics both play dominant roles in providing these necessary cues. Dynamics simulation of modern vehicles requires a multi-body non-linear approach for acceptable fidelity of motion. A vehicle can be modeled as a set of linked rigid bodies, whose connections are described by a graph. Re ...

⁹ Simulation as a tool for continuous process improvement

Mel Adams, Paul Componation, Hank Czarnecki, Bernard J. Schroer

December 1999 Proceedings of the 31st conference on Winter simulation: Simulation--a bridge to the future - Volume 1

Publisher: ACM Press

Full text available: pdf(77.44 KB) Additional Information: full citation, references, index terms

10 Simulation in a CIM environment: structure for analysis and real-time control

Catherine M. Harmonosky, Dean C. Barrick

December 1988 Proceedings of the 20th conference on Winter simulation

Publisher: ACM Press

Full text available: pdf(723.84 KB)

Additional Information: full citation, abstract, references, citings, index terms

Simulation has long been recognized as a valuable tool for analyzing manufacturing systems. It is effective for assessing the impact of changing system parameters (e.g. reducing processing time) upon system performance measures, and it can also aid decisions concerning system configuration. At Penn State, simulation is playing an important role in the development of a Computer Integrated Manufacturing Laboratory. Currently, it is being used as an analysis tool studying system design and com ...

11 Decoupled simulation in virtual reality with the MR toolkit

Chris Shaw, Mark Green, Jiandong Liang, Yunqi Sun

July 1993 ACM Transactions on Information Systems (TOIS), Volume 11 Issue 3

Publisher: ACM Press

Full text available: pdf(2.65 MB) Additional Information: full citation, references, citings, index terms

Keywords: interaactive 3D graphics, user interface software

12 WITNESS simulation software: a flexible suite of simulation tools Pam Laney Markt, Michael H. Mayer December 1997 Proceedings of the 29th conference on Winter simulation Publisher: ACM Press Full text available: ndf(810.23 KB) Additional Information: full citation, citings, index terms 13 Manufacturing applications: Neutral information structure for manufacturing simulations: a neutral information model for simulating machine shop operations Y. Tina Lee, Charles McLean, Guodong Shao December 2003 Proceedings of the 35th conference on Winter simulation: driving innovation Publisher: Winter Simulation Conference Full text available: pdf(348.20 KB) Additional Information: full citation, abstract, references, citings Small machine shops typically do not have the resources to develop custom simulations of their operations or data translators to import their data from other manufacturing software applications. This paper presents an overview of an information model currently under development at the National Institute of Standards and Technology (NIST) to address this problem. The model provides neutral data interfaces for integrating machine shop software applications with simulation. The information model ... 14 Retargeting of compiled simulators for digital signal processors using a machine description language Stefan Pees, Andreas Hoffmann, Heinrich Meyr January 2000 Proceedings of the conference on Design, automation and test in Europe Publisher: ACM Press Full text available: pdf(448.91 KB) Additional Information: full citation, references, citings, index terms Publisher Site 15 Simulating semiconductor manufacturing systems: successes, failures, and deep <u>questions</u> Karl G. Kempf November 1996 Proceedings of the 28th conference on Winter simulation Publisher: ACM Press Full text available: pdf(1.06 MB) Additional Information: full citation, references, citings 16 A simulation of Knuth's mix machine as a teaching tool Bobby Nakanelua, Michael Curtsinger January 2004 Journal of Computing Sciences in Colleges, Volume 19 Issue 3 Publisher: Consortium for Computing Sciences in Colleges Full text available: pdf(80.55 KB) Additional Information: full citation, references, index terms 17 System-level power optimization: techniques and tools Luca Benini, Giovanni de Micheli

April 2000 ACM Transactions on Design Automation of Electronic Systems (TODAES),

Volume 5 Issue 2

Publisher: ACM Press

Full text available: pdf(385.22 KB)

Additional Information: full citation, abstract, references, citings, index terms

This tutorial surveys design methods for energy-efficient system-level design. We consider electronic sytems consisting of a hardware platform and software layers. We consider the three major constituents of hardware that consume energy, namely computation, communication, and storage units, and we review methods of reducing their energy consumption. We also study models for analyzing the energy cost of software, and methods for energy-efficient software design and compilation. This survery ...

18 Optimization of a cycle time and utilization in semiconductor test manufacturing using

simulation based, on-line, near-real-time scheduling system Appa Iyer Sivakumar

December 1999 Proceedings of the 31st conference on Winter simulation: Simulation---a bridge to the future - Volume 1

Publisher: ACM Press

Full text available: pdf(142.30 KB)

19 Seeing, hearing, and touching: putting it all together

Brian Fisher, Sidney Fels, Karon MacLean, Tamara Munzner, Ronald Rensink August 2004 Proceedings of the conference on SIGGRAPH 2004 course notes SIGGRAPH '04

Publisher: ACM Press

Full text available: pdf(20.64 MB) Additional Information: full citation

20 Physical simulation of flexible Manufacturing Systems

Charles H. Falkner, Natraj Shanker

January 1984 Proceedings of the 16th conference on Winter simulation

Publisher: IEEE Press

Full text available: pdf(1.12 MB) Additional Information: full citation, abstract, references, index terms

The physical simulation capabilities of the Manufacturing Systems Laboratory are presented. The benefits of physical simulation are briefly noted. A Fischer-Technik based simulator of a flexible manufacturing cell is explained in detail. Plans to integrate computer-aided-design (CAD) into the modeling process are discussed and small robot physical simulation facilities are described. After relating some of our experiences and plans, we explain how the Manufacturing Systems Laboratory object ...
